Beginning Algebra ~ Lesson 16

Work the following examples as you listen to the recorded lecture.

Solving Percent Problems with Equations

Percent Problems

- 1. Formula: *Percent* × *Base* = *Amount*
- 2. Percent must be converted to and from a decimal
- 3. Base follows the word "of".
- 4. Amount next to the equal sign.

Translate the following percent problems and solve:

Example 1: 36% of 72 is what number?

Example 2: 0.7 is 20% of what number?

Example 3: What percent of 40 is 60?
