Prealgebra ~ Lesson 8

Work the following examples as you listen to the recorded lecture.

Variables, Algebraic Expressions, and Equations

A variable is	
An expression	
An equation	

Evaluate the following expressions for x=2, y=5, and z=3:

Example 1:	Example 2:	Example 3:	Example 4:
7 + 3 <i>z</i>	$y^3 - z$	$6 + \frac{3x}{z}$	$(4y+3z)^2$

Translate the following into variable expressions:

Example 5: A number less thirty

Example 6: A number times twenty

Example 7: The quotient of twenty and a number, decreased by three

Example 8: Twenty subtracted from twice a number

Example 9: The product of a number and 7

Example 10: Twenty decreased by twice a number
