# Florida Department of Education Adult General Education Curriculum Framework

ADULT BASIC EDUCATION-MATHEMATICS		
Program Title	Adult Basic Education (ABE)	
Program Number	990000	
Course Title	Adult Basic Education-Mathematics	
Course Number	School Districts: 9900001 Florida College System: ABX0100-ABX0199	
CIP Number	1532010200	
Grade Equivalent	0.0 - 8.9	
Grade Level	30, 31	
Standard Length	Varies (See Program Lengths Section)	

#### Purpose

The Adult Basic Education (ABE) Program includes content standards that describe what students should know and be able to do in Mathematics, Language Arts (language, speaking and listening, and writing), and Reading. The content standards serve several purposes:

- Provide a common language for ABE levels among programs
- Assist programs with ABE curriculum development
- Provide guidance for new ABE instructors
- Ensure quality instruction through professional development
- Provide basic skills instruction (0.0 8.9) and critical thinking skills to prepare students for GED preparation (9.0 12.9), postsecondary education, and employment.

The content standards should be used as a basis for curriculum design and also to assist programs and teachers with selecting or designing appropriate instructional materials, instructional techniques, and ongoing assessment strategies. Standards do not tell teachers how to teach, but they do help teachers figure out the knowledge and skills their students should have so that teachers can build the best lessons and environments for their classrooms.

The ABE content standards have been revised to include the College and Career Readiness (CCR) standards. The integration of CCR standards into ABE programs is intended to provide the foundation of knowledge and skills that students will need to transition to adult secondary programs with the goal of continuing on to postsecondary education.

### **Program Structure**

ABE is a non-credit course designed to develop literacy skills necessary to be successful workers, citizens and family members. A student enrolled in the ABE program may be receiving instruction in one or more of the following courses: Mathematics, Language Arts, or Reading.

This program is divided into levels that are reported as student educational gains: Educational Functioning Levels (EFLs) for federal reporting and Literacy Completion Points (LCPs) for state reporting. Progress through levels must be measured by approved validation methods in accordance with Rule 6A-6.014, FAC. It is the teacher's responsibility to decide and inform the student of the criteria for demonstrating proficiency in a benchmark. It is not necessary for a student to master 100% of the benchmark skills to demonstrate proficiency in a standard.

#### Program Lengths

The following table illustrates the recommended maximum number of instructional hours for each level. It is understood, however, that each student learns at his or her individual pace, and there will be students who successfully complete the program or attain their educational goals in fewer or more hours than what is recommended for each ABE instructional level.

Please visit the Assessment Technical Assessment Paper, Division of Career and Adult Education, at <a href="http://fldoe.org/core/fileparse.php/5423/urlt/1415aeatap.pdf">http://fldoe.org/core/fileparse.php/5423/urlt/1415aeatap.pdf</a> for both recommended and required assessment procedures and instruments.

Course Number	Course Title	Maximum Hours	NRS Levels
9900001 ABX0100-ABX0199	Mathematics – ABE Level One (1)	450 Hours	<b>1</b> (0.0– 1.9)
	Mathematics – ABE Level Two (2)	450 Hours	<b>2</b> (2.0-3.9)
	Mathematics – ABE Level Three (3)	300 Hours	<b>3</b> (4.0 – 5.9)
	Mathematics – ABE Level Four (4)	300 Hours	<b>4</b> (6.0 – 8.9)

#### **Special Notes**

The mathematic standards are separated into ten strands as shown in the chart below. Each strand is headed by a strand-specific set of CCR anchor standards identical across all levels of learning. Each level-specific standard corresponds to the same-numbered CCR anchor standard. In other words, each anchor standard identifying broad college and career readiness skills has a corresponding level-specific standard illustrating specific level-appropriate expectations call a benchmark skill. The table below illustrates the numbering used to indicate strands, anchor standards, and skill standards.

Source	Strand	Program	Mathematic	NRS	Anchor	Benchmark
		Area	Domain	Level	Standard	Skill
CCR.	MA.	ABE.	2.	1.	3.	a)
CCR.MA.ABE.2.						
Operations and Algebraic Thinking						
1.3 Add and subtract with 20.						
a) Relate counting to addition and subtraction by counting by 2 to add or subtract by 2.						

It is not intended that students will progress through the performance standards sequentially. The instructor may present topic-centered and/or project-based lessons that integrate standards from several academic strands.

#### ADULT EDUCATION INSTRUCTOR CERTIFICATION REQUIREMENTS

As per section 1012.39 (1)(b), F.S., each school district shall establish the minimal qualifications for part-time and full-time teachers in adult education programs.

#### Accommodations

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Adult students with disabilities must self-identify and request such services. Students with disabilities may need accommodations in areas such as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

#### **Career and Education Planning**

The following career development standards are designed to be integrated into the ABE frameworks to assist students with career exploration and planning. Students can access Florida's career information delivery system or a comparable system for career exploration and development of a career plan.

Standards:

- CP. ABE.01 Develop skills to locate, evaluate, and interpret career information.
- CP. ABE.02 Identify interests, skills, and personal preferences that influence career and education choices.
- CP. ABE.03 Identify career cluster and related pathways that match career and education goals.
- CP. ABE.04 Develop and manage a career and education plan.

### **Digital Literacy (Technology)**

Computer skills have become essential in today's world. Students use a variety of technology tools such as calculators, cell phones, and computers for multiple uses; communicate with friends and family, apply for work, classroom instruction, testing, and in the workplace. Technology standards are integrated in the instruction to demonstrate proficiency of the reading and language arts standards. (Example standards: Mathematics 4, Reading 7, Writing 6, and Speaking and Listening 5).

### Standards:

- DL. ABE.01 Develop basic keyboarding and numerical keypad skills.
- DL. ABE.02 Produce a variety of documents such as research papers, resumes, charts, and tables using word processing programs.
- DL. ABE.03 Use Internet search engines such as Google, Bing, or Yahoo to collect data and information.
- DL. ABE.04 Practice safe, legal, and responsible sharing of information, data, and opinions online.

### **Workforce Preparation Activities**

The term "workforce preparation activities" means activities, programs, or services designed to help an individual acquire a combination of basic academic skills, critical thinking skills, digital literacy skills, and self-management skills, including competencies in utilizing resources, using information, working with others, understanding systems, and obtaining skills necessary for successful transition into and completion of postsecondary education or training, or employment. (Workforce Innovation and Opportunity Act (WIOA), 2014).

The following activities should be integrated into the classroom instruction:

Critical Thinking	All students will make decisions and solve problems by specifying goals, identifying resources and constraints, generating alternatives, considering impacts, choosing appropriate alternatives, implementing plans of action, and evaluating results.
Teamwork	All students will learn to work cooperatively with people with diverse backgrounds and abilities. Students will identify with the group's goals and values, learn to exercise leadership, teach others new skills, serve clients or customers, and contribute with ideas, suggestions, and work efforts.
Employment	All students will develop job search skills for employment such as completing an application, resume, cover letter, thank you letter, and interviewing techniques.
Self-Management	All students should display personal qualities such as responsibility, self- management, self-confidence, ethical behavior, and respect for self and others.
Utilizing Resources	All students will learn to identify, organize, plan, and allocate resources (such as time, money, material, and human resources) efficiently and effectively.
Using Information	All students will acquire, organize, interpret, and evaluate information in post-secondary, training, or work situations.
Understanding Systems	All students will learn to understand, monitor, and improve complex systems, including social, technical, and mechanical systems, and work with and maintain a variety of technologies.

## ABE Mathematical Standards

The chart below provides an overview of the ten domains that comprise Florida's ABE mathematic standards across instruction levels. The mathematic standards are presented into two broad instructional groupings; 1) basic literacy and, 2) intermediate. Basic literacy includes NRS levels 1 and 2 (grade equivalent (GE: 0.0 - 3.9) and intermediate includes NRS levels 3 and 4 (GE: 4.0 - 8.9).

Each instructional level has a limited number of anchor standards. This allows mathematical instruction at each NRS level to have a narrow and deep focus that allows the student to develop an understanding of mathematical foundations, conceptual understandings, procedural skills, and fluency. The chart's shaded areas indicate that the domain does not have an anchor standard or primary focus for instruction at that particular instructional level. While the anchor standards by design guide instruction, teachers may introduce, practice, reinforce, and develop fluency at lower and/or higher instructional levels. Two domains, fractions and functions, have been noted (\*) because the suggested instruction should begin at the mid-point of the NRS level.

ADULT BASIC EDUCATION MATHEMATIC DOMAINS					
Domain	NRS Reporting	NRS Level 1	NRS Level 2	NRS Level 3	NRS Level 4
Number	Grade Equivalent (GE)	0.0 – 1.9	2.0 – 3.9	4.0 – 5.9	6.0 - 8.9
1	Number and Operations: Base Ten	0.0 – 1.9	2.0 - 3.9	4.0 - 5.9	
2	Operations and Algebraic Thinking	0.0 – 1.9	2.0 – 3.9	4.0 – 5.9	
3	Measurement and Data	0.0 – 1.9	2.0 – 3.9	4.0 – 5.9	
4	Geometry	0.0 – 1.9	2.0 – 3.9	4.0 – 5.9	6.0 - 8.9
5	Number and Operations: Fractions		*3.0 – 3.9	4.0 - 5.9	
6	Expressions and Equations			4.0 - 5.9	6.0 - 8.9
7	The Number System			4.0 – 5.9	6.0 – 8.9
8	Ratios and Proportional Relationships			4.0 – 5.9	6.0 - 8.9
9	Statistics and Probability			4.0 - 5.9	6.0 - 8.9
10	Functions				*7.0 – 8.9

# MATHEMATICS (MA) Basic Literacy, GE: 0.0 – 3.9

## Mathematics Standards NRS Level 1 Beginning ABE Literacy, GE 0.0 – 1.9

Mathematics instruction begins with basic literacy skills. The primary focus of level 1 is counting, cardinality, number sense, and base-ten operations. Students at this level are developing their understanding of whole number relationships, linear measurement (length), two-digit place value, and strategies for addition and subtraction.

This level begins building a basic foundation for algebra by introducing the concept of an equation, a variable, and the meaning of the equal sign, all within the context of addition and subtraction within 20.

Lastly, instruction provides some attention to describing and reasoning geometric shapes as a basis for understanding the properties of congruence, similarity, and symmetry.

### Mathematics Standards NRS Level 2 Beginning Basic Education, GE: 2.0 – 3.9

NRS level 2 emphasizes understanding place value for whole numbers to 1000, developing fluency in addition and subtraction to 3 digits, understanding and exploring strategies for multiplication and division within 100, and a crucial foundation for fractions. These skills prepare students for work with rational numbers, ratios, rates, and proportions in subsequent levels.

In the areas of measurement and geometry, using standard units of measure and developing understanding of the structure of rectangular arrays and areas are priorities, as well as analyzing two-dimensional shapes as a foundation for area, volume, congruence, similarity and symmetry.

NRS LEVEL 1 GE: 0.0 – 1.9	NRS LEVEL 2 GE: 2.0 – 3.9

CCR.MA.ABE.3.			
Measurement and Data			
<ul> <li>1.1 Represent and interpret data.</li> <li>a) Organize, represent, and interpret data with up to three categories.</li> <li>Ask and answer questions about the total number of data points.</li> <li>How many are represented in each category.</li> </ul>	<ul> <li>2.1 Represent and interpret data.</li> <li>a) Draw a picture graph and a bar graph (with single-unit scale) to represent a data set with up to four categories.</li> <li>Solve simple put-together, take-apart, and compare problems using information presented in a bar graph.</li> </ul>		
<ul> <li>How many more or less are represented in one category than in another.</li> </ul>	<ul> <li>b) Draw a scaled picture graph and a scaled bar graph to represent a data set with several categories.</li> <li>Solve one- and two-step "how many more" and "how many less" problems using information presented in scaled bar graphs.</li> </ul>		
	<ul> <li>c) Create a line plot to represent data.</li> <li>Generate measurement data by using measuring tools marked with halves and fourths of a unit of measure (ruler).</li> <li>Show the data by making a line plot, where the horizontal scale is marked off in units (whole numbers, halves, or fourths).</li> </ul>		
1.2 Measure lengths indirectly and by iterating	2.2 Measure and estimate lengths in standard		
(repeating) length units.	units.		
<ul> <li>a) Express the length of an object as a whole number of length units by laying multiple copies of a shorter object (the length unit) end to end.</li> <li>b) Understand that the length measurement of an object is the number of same-size length units that span it with no gaps or overlaps.</li> </ul>	<ul> <li>a) Compare and describe how using standard (ruler) and nonstandard (thumb) units of measure relate to the size of the unit chosen.</li> <li>b) Estimate lengths using units of inches, feet, centimeters, and meters.</li> <li>c) Measure to determine how much longer one object is than another, using a standard length unit.</li> </ul>		
	2.3 Relate addition and subtraction to length.		
	<ul> <li>Represent whole numbers as lengths from 0 on a number line diagram.</li> </ul>		
	<ul> <li>Represent whole number sums and differences within 100 on a number line diagram.</li> </ul>		
	2.4 Solve problems involving measurement and		
	estimation of intervals of time, liquid volumes,		
	and masses of objects.		
	minute.		
	<ul> <li>Solve word problems involving addition and subtraction of time intervals in minutes by representing the problem on a number line diagram.</li> </ul>		
	<ul> <li>c) Measure and estimate liquid volumes and masses of objects using standard units of grams (g), kilograms (kg), and liters (l).</li> <li>d) Add subtract multiply, or divide to solve one</li> </ul>		
	$\alpha_j$ $\beta_{\alpha\alpha}$ , $\beta_{\alpha\beta}$ ,		

	step word problems involving masses or
	volumes that are given in the same units, by
	using drawings, such as a beaker with a
	measurement scale, to represent the problem.
	2.5 Understand concepts of area measurement
	and relate area to multiplication and addition.
	a) Recognize area as an attribute of plane figures
	and understand concepts of area measurement.
	<ul> <li>A square with side length 1 unit, called "a</li> </ul>
	unit square," is said to have "one square
	unit" of area, and can be used to measure
	area.
	• A plane figure which can be covered without
	gaps or overlaps by ( <i>n</i> ) unit squares is said
	to have an area of (n) square units.
	b) Measure areas by counting unit squares (square
	cm., square m., square in., square ft., and non-
	specific units).
	c) Relate area to the operations of multiplication
	and addition.
	Use math tiles to find the area of a rectangle
	and show that the area is the same as by
	multiplying the side lengths.
	<ul> <li>Multiply side lengths to find areas of</li> </ul>
	rectangles with whole number side lengths
	in the context of solving real world and
	mathematical problems
	<ul> <li>Use area models to represent the</li> </ul>
	distributive property in mathematical
	reasoning
	<ul> <li>Use math tiles to show that the area of a</li> </ul>
	rectangle with whole number side lengths a
	and $b + c$ is the sum of a x b and a x c
	d) Recognize area as additive Find areas of
	rectilinear figures (formed by straight lines) by
	decomposing them into non-overlapping
	rectangles and adding the areas
	2.6 Recognize perimeter as an attribute of plane
	figures and distinguish between linear and area
	measures.
	a) Solve real world and mathematical problems
	involving perimeters of polygons.
	<ul> <li>Find the perimeter given the side lengths</li> </ul>
	<ul> <li>Find an unknown side length</li> </ul>
	<ul> <li>Exhibit rectangles with the same perimeter</li> </ul>
	and different areas or with the same area
	and different perimeters
GE: 0.0 – 1.9	GE: 2.0 – 3.9

<ul> <li>Geometry</li> <li>1.1 Analyze, compare, and create (compose) shapes.</li> <li>a) Analyze and compare two- and three-dimensional shapes that are different sizes and orientations.</li> <li>b) Use informal language to describe: <ul> <li>Their similarities and differences.</li> <li>Their parts such as the number of sides and vertices/corners.</li> <li>Other attributes such as having sides of</li> </ul> </li> </ul>	<ul> <li>2.1 Analyze and compare angles within shapes.</li> <li>a) Recognize and draw shapes having specified attributes, such as a given number of angles or a given number of equal faces.</li> <li>b) Identify triangles, quadrilaterals, pentagons, hexagons, and cubes.</li> </ul>
equal length. <b>1.2 Reason with composite shapes and their</b> <b>attributes.</b> a) Compose (create) two-dimensional shapes	<ul><li>2.2 Reason with shapes and their attributes.</li><li>a) Partition circles and rectangles into two, three, or four equal shares, describe the shares using the</li></ul>
(rectangles, squares, trapezoids, triangles, half- circles, and quarter-circles) or three- dimensional shapes (cubes, right rectangular prisms, right circular cones, and right circular cylinders) to create a composite shape (the shape of a house is made from a square and triangle), and new shapes from the composite shape.	<ul> <li>words halves, thirds, half of, a third of, etc.,</li> <li>b) Recognize that equal shares of identical wholes need not have the same shape.</li> <li>b) Understand that shapes in different categories (rhombuses, rectangles, and others) may share attributes (having four sides), and that the shared attributes can define a larger category (quadrilaterals).</li> <li>Recognize rhombuses, rectangles, and squares as examples of quadrilaterals, and draw examples of quadrilaterals that do not belong to any of these subcategories.</li> <li>c) Partition shapes into parts with equal areas. Express the area of each part as a unit fraction of the whole</li> </ul>
NRS LEVEL 1 GE: 0.0 – 1.9	NRS LEVEL 2 GE: 2.0 – 3.9
CCR.MA.ABE.5. Number and Operations: Fractions Note: Suggested instructional level begins at 3.0	
Not a focus standard at this level	2.1 Develop understanding of fractions as numbers using denominators of 2, 3, 4, 6, or 8
	<ul> <li>a) Understand a fraction as the quantity formed when a whole is partitioned into equal parts.</li> <li>b) Understand a fraction as a number on the number line; represent fractions on a number line diagram.</li> </ul>
	<ul> <li>Represent a fraction on a number line diagram by defining the interval from 0 to 1 (endpoints) and partitioning it into equal parts.</li> <li>Explain a fraction on a number line diagram has the interval size <i>a/b</i>.</li> </ul>

2.2 Develop understanding of equivalent
fractions
a) Explain equivalence of fractions in special cases,
and compare fractions by reasoning about their
size
Conclude two fractions as equivalent (equal)
If they are the same size, or the same point
on a number line.
<ul> <li>Generate simple equivalent fractions. (1/2 =</li> </ul>
2/4 $4/6 - 2/3$ by using a visual fraction
<ul> <li>Express whole numbers as fractions, and</li> </ul>
recognize fractions that are equivalent to
whole numbers
b) Compare two fractions with the same numerator
b) Compare two fractions with the same numerator
or the same denominator.
<ul> <li>Recognize that comparisons are valid only</li> </ul>
when the two fractions refer to the same
whole
Depart the regults of comparisons with the
Record the results of companyons with the
symbols >, =, or <, and justify the
conclusions with a visual fraction model.

# MATHEMATICS (MA) Intermediate, GE: 4.0 – 8.9

### Mathematics Standards NRS Level 3 Low Intermediate Basic Education, GE: 4.0 – 5.9

NRS level 3 provides the mathematical fundamentals for all higher mathematical studies. The focus standards for this instructional level provide a conceptual foundation for learning functions. The emphasis continues on standards for numbers and operations, however, attention to algebra and geometry increase considerably.

Fluency with multi-digit whole and decimal numbers as well as calculations with fractions and the relationships between them is critical at this level. This extends to working with the concept of ratio and rates, addition and subtraction of fractions, and understanding why the procedures for multiplying and dividing fractions make sense.

Students at level 3 generate patterns in numbers and shapes in addition to reading, writing, and interpreting expressions and equations. In addition, analyzing geometric properties, such as parallelism, perpendicularity, and symmetry, and developing and finding volumes of right rectangular prisms take precedence.

Measurement and data instruction shifts to sampling techniques and data collection through statistical questioning; to previous standards about data, it adds the understanding of measures of center and spread and display of collected data with line plots.

Mathematics Standards NRS Level 4 High Intermediate Basic Education, GE: 6.0 – 8.9 Like preceding levels, NRS level 4 also emphasizes number sense and operations, but here the attention is on fluency with all four operations with rational numbers—both negative and positive. The foundation for understanding of irrational numbers is built here, including calculation with square and cube roots and solving simple quadratic equations.

Another area of concentration is algebra and functions: formulating and reasoning about expressions, equations, and inequalities; solving linear equations and systems of linear equations; grasping the concept of a function; and using functions to describe quantitative relationships.

Building on the geometric analysis in level 3, the focus turns to analyzing two- and threedimensional figures using distance, angle, similarity, and congruence, and understanding basic right triangle trigonometry.

NRS level 4 is where understanding and applying ratios, rates, and proportional reasoning are developed and a bridge between rational number operations and algebraic relationships is created.

Having worked with measurement data in previous levels, students at this level develop notions of statistical variability and learn to understand summary statistics and distributions. The concept of probability is introduced and developed at this level.

Number and O	perations: Base Ten				
3.1 Generalize	place value understanding for				
multi-digit who	le numbers.	Not a focus standard at this level.			
a) Explain that	in a multi-digit whole number, a digit	· · · · · · · · · · · · · · · · · · ·			
in one place	represents ten times what it				
represents ir	n the place to its right.				
b) Read and w	rite multi-digit whole numbers using				
numerals, na	ames, and expanded form.				
c) Compare two	o multi-digit numbers based on the				
digits in eacl	n place, using greater than (>),				
equal to (=),	and less than (<) symbols.				
d) Use place va	alue to round multi-digit whole				
numbers to a	any place.				
3.2 Use strateg	ies based on place value				
understanding	and properties of operations to				
perform multi-	ligit arithmetic.				
a) Fluently add	and subtract multi-digit whole				
numbers usi	ng the standard algorithm (step-by-				
step procedu	ıre).				
b) Multiply a wh	nole number of up to four digits by				

	one-digit and two two-digit numbers	
	- Illustrate and explain the calculation by using	
	<ul> <li>Indistrate and explain the calculation by using aquations (statement that save two</li> </ul>	
	equalions (statement that says two	
	(dioploya), and/or area models	
	(ulsplays), anu/or area models.	
C)	Find whole-number quotients and remainders	
	with up to four-digit dividends and one-digit	
	divisors.	
	Use the relationship between multiplication and division.	
	Illustrate and explain the calculation by using	
	equations, and/or geometry.	
3.3	Use the place value system to understand	
de	cimals.	
a)	Recognize that a digit represents 10 times as	
	much as it represents in the place to its right and	
	1/10 of what it represents in the place to its left.	
b)	Explain patterns in the number of zeros of the	
,	product when multiplying a number by powers of	
	10.	
C)	Explain patterns in the placement of the decimal	
	point when a decimal is multiplied or divided by	
	a power of 10.	
	<ul> <li>Use whole-number exponents to denote powers of 10.</li> </ul>	
d)	Read, write, and compare decimals to	
- /	thousandths.	
	<ul> <li>Read and write decimals to thousandths</li> </ul>	
	using numerals, names, and expanded form.	
	<ul> <li>Compare two decimals to thousandths</li> </ul>	
	based on the digits in each place, using $>$ , =,	
	and < symbols to record the results of	
	comparisons.	
e)	Use place value understanding to round	
-,	decimals to any place.	
3.4	Perform operations with multi-digit whole	
nu	mbers and with decimals to hundredths.	
a)	Fluently multiply multi-digit whole numbers using	
,	the standard algorithm.	
b)	Find whole-number quotients of whole numbers	
,	with up to four-digit dividends and two-digit	
	divisors by using strategies based on place	
	value the properties of operations and/or the	
	relationship between multiplication and division	
	<ul> <li>Illustrate and explain the calculation by using</li> </ul>	
	equations, geometry, and/or models	
C)	Add, subtract, multiply, and divide decimals to	
-,	hundredths by using concrete models or	
	drawings and strategies based on place value	
	properties of operations and/or the relationship	

	between addition and subtraction.	
	• Relate the strategy to a written method and	
	explain the reasoning used.	
	Use financial literacy applications.	
	NRS Level 3 GE: 4.0 – 5.9	NRS Level 4 GE: 6.0 – 8.9
	R.MA. ABE 2. erations and Algebraic Thinking	
3.1	Use the four operations with whole numbers	
to	solve problems.	Not a focus standard at this level.
a)	Interpret a multiplication equation as a	Refer to expressions and equations (page
	comparison statement, interpret $35 = 5 \times 7$ as $35$	21) and functions (page 29).
	is 5 times as many as 7 and 7 times as many as	
	5. Depresent verbal statements of	
	Represent verbal statements of     multiplicative comparisons as multiplication	
	equations	
b)	Multiply or divide to solve word problems	
/	involving multiplicative comparison by using	
	drawings and equations with a symbol for the	
	unknown number to represent the problem to	
	distinguishing multiplicative comparison from	
-	additive comparison.	
C)	Solve multi-step word problems using the four	
	remainders must be interpreted	
	Use equations with a letter standing for the	
	unknown quantity.	
	Assess the reasonableness of answers	
	using mental computation and estimation	
	strategies including rounding.	
3.2	Determine factors and multiples.	
a)	Find all factor pairs for a whole number in the	
<b>b</b> )	range 1–100. Recognize that a whole number is a multiple of	
D)	each of its factors	
c)	Determine whether a whole number in the range	
-,	1–100 is a multiple of a one-digit number.	
d)	Determine whether a whole number in the range	
	1–100 is prime or composite.	
3.3	Generate and analyze patterns.	
a)	Generate a number or shape pattern that follows	
<b>ل</b> م	a given rule.	
D)	were not explicit in the rule itself	
3.4	Write and interpret numerical expressions	
a)	Use parentheses, brackets, or braces in	
,	expressions, and evaluate expressions with	
	these symbols.	
b)	Write simple expressions that record	

	calculations with numbers, and interpret expressions without evaluating them.	
	NRS Level 3 GE: 4.0 – 5.9	NRS Level 4 GE: 6.0 – 8.9
CC Me	R.MA.ABE.3. easurement and Data	
<b>3.1</b> <b>co</b> a)	<ul> <li>Solve problems involving measurement and nversion from a larger unit to a smaller unit. Use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money.</li> <li>Include problems involving simple fractions or decimals.</li> <li>Represent measurement quantities using diagrams such as number line diagrams that feature a measurement scale.</li> <li>Apply the area and perimeter formulas for rectangles in real world and mathematical</li> </ul>	Not a focus standard at this level. Refer to statistics and probability (page 26).
3.2	problems. <b>Convert like measurement units within a</b>	
<b>giv</b> a)	ven measurement system. Convert among different-sized standard measurement units (km., m., cm., kg., g., lb., oz., I., ml., hr., min., sec.), within a measurement system, such as convert 5 cm to 0.05 m, and use these conversions in solving multi-step, real world problems.	
<b>3.3</b> a) b)	<ul> <li>Represent and interpret data.</li> <li>Make a line plot to display a data set of measurements in fractions of a unit (1/2, 1/4, 1/8).</li> <li>Solve problems involving information presented in line plots.</li> <li>Use plots of numbers other than measurements</li> </ul>	
3.4	Demonstrate concepts of angles and	
me a)	easure angles. Recognize angles as geometric shapes that are formed wherever two rays share a common endpoint.	
b)	<ul> <li>Understand concepts of angle measurement:</li> <li>An angle is measured to a circle with its center the common endpoint of the rays and the fraction of the circular arc between the points where the two rays intersect the circle.</li> <li>An angle that turns through 1/360 of a circle is called a "one-degree angle," and can be used to measure angles.</li> <li>An angle that turns through (<i>n</i>) one-degree angles is said to have an angle measure of</li> </ul>	

	NRS Level 3 GE: 4.0 – 5.9	NRS Level 4 GE: 6.0 – 8.9
	<ul> <li>Recognize volume as additive. Find volumes of solid figures composed of two non- overlapping right rectangular prisms by adding the volumes; apply this technique to solve real world problems.</li> </ul>	
	<ul> <li>Apply the formulas V= L × W × H and V= B × H for rectangular prisms to find volumes of right rectangular prisms edge lengths.</li> </ul>	
	<ul> <li>Represent threefold products as volumes such as the associative property of multiplication.</li> <li>Apply the formulas V= L × W × H and</li> </ul>	
	by packing it with unit cubes, show that the same volume would be found by multiplying the edge lengths and by multiplying the height by the area of the base.	
c)	Relate volume to the operations of multiplication and addition and solve real world and mathematical problems involving volume.	
b)	Measure volumes by counting unit cubes, using cubic cm., cubic in., cubic ft., and improvised units.	
	<ul> <li>A solid figure which can be packed using (n) unit cubes is said to have a volume of (n) cubic units.</li> </ul>	
	<ul> <li>A cube with side length 1 unit, called a "unit cube," is said to have "one cubic unit" of volume, and can be used to measure</li> </ul>	
wh a)	ole numbers. Recognize volume as an attribute of solid figures and understand concepts of volume	
3.5	Apply concepts of volume measurement and	
e)	of the parts. Solve addition and subtraction problems to find unknown angles on a diagram by using an equation with a symbol for the unknown angle measure	
d)	Recognize angle measure as additive. When an angle is decomposed (broken) into non- overlapping parts, the angle measure is the sum	
c)	Measure and sketch angles in whole-number degrees using a protractor.	
	(n) degrees.	

CCR.MA.ABE.4.					
<ul> <li>3.1 Draw and identify lines and angles, and classify shapes by properties of their lines and angles.</li> <li>a) Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines. Identify these in two-dimensional figures.</li> </ul>	<ul> <li>4.1 Draw, construct, and describe geometrical figures and describe the relationships between them.</li> <li>a) Solve problems involving scale drawings of geometric figures, including computing actual lengths and areas from a scale drawing and reproducing a scale drawing at a different scale.</li> </ul>				
<ul> <li>3.2 Graph points on the coordinate plane to solve mathematical and real-world problems.</li> <li>a) Use a pair of perpendicular number lines, (axis/axes), with the intersection of the lines (the origin) arranged at 0 on each line and a given point in the plane located by using an ordered pair of numbers, called its coordinates.</li> <li>Demonstrate the first number indicates how far to move from the origin in the direction of one axis.</li> <li>Demonstrate the second number indicates how far to move in the direction of the second axis.</li> <li>Name and/or label the two axes and the coordinates correspond (<i>x</i>-axis and <i>x</i>-coordinate, <i>y</i>-axis and <i>y</i>-coordinate).</li> <li>b) Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation.</li> </ul>	<ul> <li>4.2 Solve mathematical and real-world problems involving angle, measure, area, surface area, and volume.</li> <li>a) Know the formulas for the area and circumference of a circle and use them to solve problems.</li> <li>Give an informal derivation (example) of the relationship between the circumference and area of a circle.</li> <li>b) Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write and solve simple equations for an unknown angle in a figure.</li> <li>c) Solve problems involving area, volume and surface area of two- dimensional and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.</li> </ul>

a) b) c)	Discuss a statistical question as one that anticipates variability in the data related to the question and accounts for it in the answers. Discuss a set of data collected to answer a statistical question has a distribution which can be described by its center, spread, and overall shape. Discuss that a measure of center for a numerical data set summarizes all of its values with a single number, while a measure of variation describes how its values vary with a single number.		<ul> <li>their context, such as by:</li> <li>Reporting the number of observations.</li> <li>Describing the nature of the attribute under investigation, including how it was measured and its units of measurement.</li> <li>Giving quantitative measures of center such as median and/or mean.</li> <li>Giving quantitative measures variability such as interquartile range (data divided into quarters) and/or mean absolute deviation (average distance between data value and the mean).</li> <li>Describing any overall pattern and any striking deviations from the overall pattern</li> </ul>
		b)	with reference to the context in which the data were gathered. Relating the choice of measures of center and variability to the shape of the data distribution and the context in which the data were gathered.
3.2	2 Summarize and describe distributions.	4.2	Use random sampling to draw inferences
a)	Display numerical data in plots on a number	ab	out a population.
,	line, including:	a)	Justify that statistics can be used to gain
•	Dot plots (graph of data using dots).	,	information about a population by examining a
•	Histograms (bar graph using ranges of data).		sample of the population.
•	Box plots (graph uses rectangles with lines extending from the top and bottom).		<ul> <li>Generalizations about a population from a sample are valid only if the sample is representative of that population.</li> <li>Understand that random sampling tends to produce representative samples and support valid information.</li> </ul>
		b)	Use data from a random sample to draw
			characteristic of interest
		c)	Generate multiple samples (or simulated
		•)	samples) of the same size to gauge the variation in estimates or predictions.
		4.3	Draw informal comparative inferences about
		two	o populations.
		a)	Informally assess the degree of visual overlap of two numerical data distributions with similar variabilities
			<ul> <li>Measuring the difference between the centers by expressing it as a multiple of a measure of variability.</li> </ul>
		b)	Use measures of center (median and mode) and
			measures of variability (interquartile range and
			mean absolute deviation) for numerical data
			from random samples to draw informal
			comparative inferences about two populations.

A Investigate chance processes and develop
4.4 investigate chance processes and develop,
a) Justify that the probability of a chance event is a
a) Susting that the probability of a chance event is a
likelihood of the event occurring
l arger numbers indicate greater likelihood
Larger numbers indicate greater intellitoru.
• A probability hear o indicates an unlikely event.
<ul> <li>A probability around 1/2 indicates an event that is neither unlikely nor likely.</li> </ul>
<ul> <li>A probability near 1 indicates a likely event.</li> </ul>
b) Approximate the probability of a chance event
by collecting data on the chance process that
produces it and observing its long-run relative frequency.
Predict the approximate relative frequency
given the probability.
c) Develop a probability model and use it to find probabilities of events.
<ul> <li>Compare probabilities from a model to</li> </ul>
observed frequencies; if the agreement is
not good, explain possible sources of the
discrepancy.
<ul> <li>Develop a uniform probability model by</li> </ul>
assigning equal probability to all outcomes,
and use the model to determine probabilities of events.
Develop a probability model (which may not
be uniform) by observing frequencies in data generated from a chance process.
d) Illustrate that, just as with simple events, the
probability of a compound event is the fraction of
outcomes in the sample space for which the
compound event occurs.
e) Represent sample spaces for compound events
using methods such as organized lists, tables and tree diagrams.
<ul> <li>For an event described in everyday</li> </ul>
language, such as "rolling double sixes",
identify the outcomes in the sample space
which compose the event.
4.5 Investigate patterns of association in data
with two variables (bivariate).
a. Construct and interpret scatter plots (a graph of
plotted points that show the relationship
between two sets of data) for bivariate
measurement data to investigate patterns of
association between two quantities.
<ul> <li>Describe patterns such as clustering,</li> </ul>
outliers, positive or negative association,

	linear association, and nonlinear
	association.
	model relationships between two quantitative
	variables.
	<ul> <li>For scatter plots that suggest a linear</li> </ul>
	association, informally fit a straight line, and
	assess the model fit by judging the
	closeness of the data points to the line.
	a. Use the equation of a linear model to solve
	problems in the context of bivariate
	intercept
	b. Verify that patterns of association can also be
	seen in bivariate categorical data by displaying
	frequencies and relative frequencies in a two-
	way table.
	Construct and interpret a two-way table
	variables collected from the same subjects
	<ul> <li>Use relative frequencies calculated for rows</li> </ul>
	or columns to describe possible association
	between the two variables.
