

## **Beginning Algebra ~ Lesson 16**

Work the following examples as you listen to the recorded lecture.

### **Solving Percent Problems with Equations**

#### Percent Problems

1. Formula: ***Percent × Base = Amount***
2. Percent – must be converted to and from a decimal
3. Base – follows the word “of”.
4. Amount – next to the equal sign.

Translate the following percent problems and solve:

Example 1: 36% of 72 is what number?

Example 2: 0.7 is 20% of what number?

Example 3: What percent of 40 is 60?
