**Lesson 18-B, page 2**

Remember….
To graph a line by Point-Plotting:
1. Pick a value for either **x** or **y**.
2. Solve the equation for the unknown value.
3. Plot the point, and repeat these steps for another value.
4. Hint: pick numbers that make the equation easy to solve.

Example 2: $y = -x + 2$

x	y

Example 3: $x + 3y = 6$

x	y
