

**Beginning Algebra ~ Lesson 29**

Work the following examples as you listen to the recorded lecture.

**Dividing Polynomials****Remember:**

Place each term in the numerator over the common denominator and reduce

$$\text{Example 1: } \frac{12x^4+3x^2}{x}$$

$$\text{Example 2: } \frac{20x^3-30x^2+5x+5}{5}$$

$$\text{Example 3: } \frac{-9x^4+18x^5}{6x^5}$$

$$\text{Example 4: } \frac{-12a^3+36a-15}{3a}$$
